HYDRANT FLUSHING

The Greenburgh Water Department announces a maintenance program to operate and flush fire hydrants for the week beginning Monday, March 26, 2012 thru Wednesday, April 4, 2012. This action is necessary to make sure the fire hydrants are in good working order in case of emergencies and to help flush sediment out of the distribution system.

The hydrant flushing and operating action will take place during the day from 9:30 A.M. to 2:30 P.M. Greenburgh Water District Customers in the neighborhoods listed and the immediate vicinity should expect temporary periods of discolored water and lowered pressure resulting from this maintenance operation. This discoloration consists primarily of harmless silt and air and does not affect the safety of the water. For further information, customers may contact the Greenburgh Water Department at 914-993-1592 or visit the Town website www.greenburghny.com.

WAREHOUSE LANE, including roads near N. Payne St., Nepperhan Ave., Lamont St., Haven St., Hayes St.

Please be advised that flushing may cause water pressure variations and discoloration of water. This does not represent a health hazard. However, customers are cautioned to determine if the water is clear before washing clothes (or any other processing) as staining may occur. If you experience discoloration in your water after crews have been flushing in your neighborhood, clear the pipes in your home by running cold water faucets for a few minutes. The water is absolutely safe. However, to avoid any inconvenience, we suggest you monitor the water before doing any laundry and keep water in the refrigerator for drinking and cooking.
