

Greenburgh Town Hall Stormwater Retrofit Guided Tour

As you walk through the Town Hall Parking Area you may observe the various stormwater management retrofits that have been added in recent months. The purpose of the retrofits are to demonstrate the utilization of multiple low-impact stormwater design practices that benefit the environment while also providing attractive landscaping and site characteristics.

In an effort to further educate residents, students and contracting professionals on stormwater runoff issues and low-impact management practices, the Town of Greenburgh Bureau of Engineering in conjunction with the Department of Community Development and Conservation present a guided tour by a knowledgeable, Licensed Professional Engineer or Certified Arborist. The guided tour will include information on:

- *The low-impact stormwater management design and practices implemented at the Town Hall*
- *The benefits of each low-impact stormwater management practice to the environment*
- *Alternative low-impact stormwater management practices that can be implemented in future projects*

When: Friday, January 23, 2015

Meeting Location: Greenburgh Town Hall Front Desk

Meeting Time: 2 P.M.
